

EDI

A Guide to EDI Translation Software

1 9 9 8 E d i t i o n

This document has been prepared by Logistics Management Institute to assist in evaluating EDI translation software. It contains information on vendors, as well as a discussion of functions and features to consider when evaluating EDI software packages. Although this guide was prepared in 1998, and some of the vendor information may be dated, it is nevertheless an invaluable aid to understanding the issues involved in EDI translation.

A Guide to EDI Translation Software, 1998 Edition

This edition of the Logistics Management Institute's *A Guide to EDI Translation Software* updates and expands the information presented in our previous versions. The guide provides information on commercially available electronic data interchange (EDI) translation software packages, EDI support products, and EDI products developed exclusively in response to federal and Department of Defense (DoD) procurement initiatives. The guide was first created in 1989 to aid federal government activities, including military departments and defense agencies, in procuring software for their EDI programs. However, many commercial organizations with an EDI program have also found the guide useful.

The guide provides an introduction to EDI translation software, identifies a variety of EDI software packages, assesses the key features of each package, provides a list of functions and features that can be in a software package, and highlights features we believe are required to meet the EDI needs of federal government and DoD programs for several operating environments. The guide also includes a short overview on selecting EDI translation software.

We obtained information on the software packages from product brochures and telephone interviews. We have not seen demonstrations of all software packages, so we cannot endorse their effectiveness. Furthermore, we did not survey vendors that remarket EDI translation software products or sell industry-specific products that do not satisfy federal government or DoD EDI requirements. As in the preparation of our earlier editions, some vendors did not respond to our requests for information.

The guide includes the following seven appendices.

- ◆ *Appendix A* provides an introduction to EDI translation software and clarifies some features that purchasers frequently misconstrue or overlook when purchasing translation software.
- ◆ *Appendix B* identifies the EDI software vendors we contacted. Table B-1 lists the vendors and the type of hardware (microcomputer, minicomputer, or mainframe) required to use their software. The table also indicates if a vendor's software operates with a Unix-based operating system and Microsoft Windows, Windows NT, and local area networks (LANs). Table B-1 indicates if a vendor's software offers EDI security features and is available on a General Services Administration (GSA) schedule or DoD contract. Table B-2 identifies the vendors that were excluded from the guide and the associated reasons.
- ◆ *Appendix C* provides information on the EDI translation software vendors identified in Table B-1 (but excludes EDI support products as well as EDI software in support of federal and DoD procurement programs). It focuses on all EDI products offered by the vendors including the hardware operating environment, software pricing, availability on

federal procurement contracts, and third-party networks that the software package accesses.

- ◆ *Appendix D* identifies 52 functions and features that can be contained in an EDI translation software package. The appendix also indicates the functions that we consider required to meet the EDI needs of federal and DoD programs in specific operating environments.
- ◆ *Appendix E* lists the steps to follow when using the guide to select EDI translation software packages.
- ◆ *Appendix F* provides information on EDI support products and products developed to meet federal and DoD EDI procurement programs. It focuses on the hardware operating environment, software pricing, and availability through federal procurement contracts.
- ◆ *Appendix G* provides a glossary that defines the acronyms and terms used to describe EDI software functions and features.

If you need further information on the EDI translation software vendors or the capabilities of their software, contact the vendors directly. If you have general questions regarding EDI, you may contact:

email: hfrohman@lmi.org

Federal and DoD agencies may obtain a free copy of the guide by sending a request via the Internet to library@lmi.org. Requests must include the requester's name, organization, address, and telephone number. Commercial organizations may obtain copies by sending a check made out to the Logistics Management Institute for \$20 per copy. All requests should cite Report IR805T1 and be sent to the attention of the Library.

The guide may also be viewed in electronic format at <http://gravity.lmi.org/ediguide> using Adobe Acrobat Reader through the Logistics Management Institute's World Wide Web home page.

Appendix A

Understanding EDI Translation Software

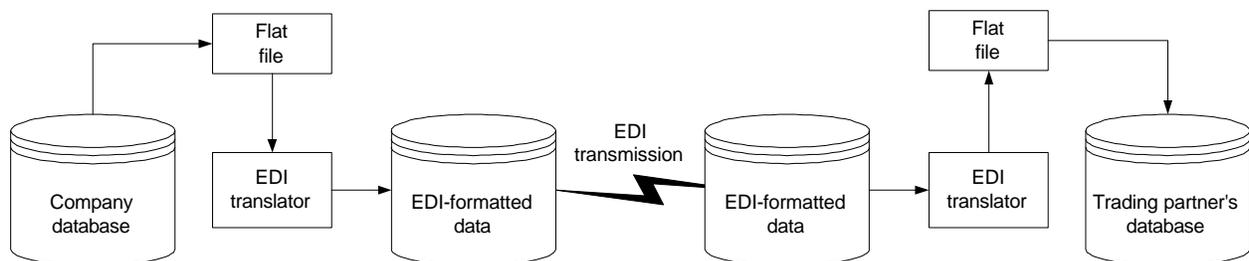

INTRODUCTION

Selecting an electronic data interchange (EDI) translation software product can be an arduous task. However, the selection process is relatively simple when the purchaser has an adequate understanding of translation software. This appendix provides prospective purchasers with an understanding of EDI translation software and clarifies some features that they frequently misconstrue or overlook when purchasing translation software. This appendix also discusses the communications software required to send and receive EDI-formatted data electronically to and from a trading partner.

FUNCTION OF EDI TRANSLATION SOFTWARE

EDI is the computer-to-computer exchange of routine business information using standard electronic formats. Translation software aids in that exchange by converting data extracted from an application database into a standard EDI format for transmission to one or more trading partners. The software also converts EDI-formatted data received from those trading partners into a file format that the application system recognizes. Ultimately, the data are processed and written to a database. Figure A-1 shows the EDI translation process.

Figure A-1. EDI Translation Process

SYSTEM INTERFACES

To convert an application system's data into an EDI format, the translation software needs to know the location of all data to be transmitted. Some translation software packages require users to create a separate file following a specific format. That file, typically referred to as a flat file, is a specially formatted American Standard Code for Information Interchange (ASCII) text file. A flat file forces the standardization of data from various files and in different formats so the EDI translation software can locate and use the data to create an EDI-formatted message or translate the data in such a message into a flat file.

Other translation software packages give users the capability to define their own flat file formats and employ a utility program called a *transaction set mapper*. That program cross-references the contents of a user-defined flat file with an EDI standard transaction set and subsequently translates the flat-file information into the desired transaction set. A transaction set mapper offers two primary benefits. It reduces the amount of application interface programming by editing data before they are accepted into the database, and it reduces the amount of maintenance programming in support of the application system interface programs. Because many transaction set mapping utility programs are sophisticated, potential purchasers should verify that a utility is user-friendly before purchasing it.

Application system interface software has a vital role in both outgoing (data extracted from an application system for transmission via EDI) and incoming (EDI-formatted data received from trading partners) data flows. During the outgoing flow, the software extracts data from the application system and places it in a flat file for conversion into EDI-formatted data prior to transmission to one or more trading partners. When the data flow is reversed, the application system interface software extracts data from a flat file and prepares it for acceptance by the application program. In short, application system interface software either reads or writes flat files of information that are used to send information between a trading partner's application system and EDI translation software.

Some new translation software packages do not use a flat file. They exchange data directly with the application system database and eliminate the need for interface software between the application system and the translation software. Currently, these EDI translation software products support only a few database packages—most are designed for microcomputers.

COMMUNICATIONS SOFTWARE

Communications is another area that purchasers of EDI translation software frequently misunderstand. A third-party EDI value-added network (VAN) is usually needed to exchange information electronically with trading partners. An EDI VAN provides many services to its subscribers. The services include electronic mailboxing of EDI transmissions, protocol and speed conversion so that dissimilar hardware systems can communicate, and EDI record-keeping to provide audit trails.

Many purchasers assume that all EDI translation software automatically connects to a VAN and exchanges EDI documents. That assumption is false. In developing an EDI capability, some type of data communications software will be needed as well as an EDI VAN communications script.

Data communications software is not specific to an EDI application. It typically operates the modem, dials the VAN, and connects to the VAN's host computer. The software is generic and frequently provided by vendors of EDI translation software for microcomputers. Most EDI translation software vendors assume that minicomputers and mainframes already have data communications capability and do not normally include it. Some vendors, however, will provide data communications software in their software packages for those computers, but at additional cost.

The EDI VAN communications script deposits data into and retrieves data from EDI VAN mailboxes. The script is a predefined routine or set of commands that provides processing instructions specific to the VAN's host computer. The instructions include, but are not limited to, depositing data into a trading partner's VAN mailbox, retrieving the data from the VAN, or both types of processing. Because each VAN service has developed its own EDI mailbox system, an EDI translation software vendor should be selected that provides a communications script written specifically for the VAN. If an EDI VAN has not been selected, a software vendor should be considered that offers scripts for several different EDI VANs.

Many translation software packages, particularly those for microcomputers, include an EDI VAN communications script integral to the data communications software. If such a package is being considered, the inclusion of an automatic recovery and restart feature that provides the capability to recover automatically any data processed during a power or communications failure should be verified. When integrated with the translation software, this feature also normally restarts the translation software so that processing can begin at the point where it was terminated.

SUMMARY

By understanding the fundamentals of EDI translation software and the pitfalls that can occur during the selection process, a person should be able to purchase the EDI translation software that best meets the requirements at the lowest cost.

Appendix B

EDI Translation Software Vendors

This appendix identifies the EDI translation software vendors contacted during the preparation of this guide. Table B-1 shows the hardware platforms—microcomputer, minicomputer, or mainframe—that each vendor supports. Table B-1 also indicates whether the vendor supports Unix-based systems, Windows- or Windows NT-based systems, and LANs. Finally, Table B-1 indicates if the vendor’s software products offer security features and if they are available on a GSA schedule or DoD contract. (Descriptions of most software products are provided in Appendix C; the software products that focus on procurement and support applications are described in Appendix F.) Table B-2 lists the vendors of various EDI software products that we did not include in the guide and our reasons for excluding them.

^a Products described in Appendix F.

^b Company is listed twice because it offers generic EDI translation software products as well as products focusing on government procurement.

Table B-2. EDI Translation Software Vendors Excluded from Guide

Company	Contact	Reason
AIM Computer Solutions, Inc. 42872 Mound Road Sterling Heights, MI 48314	Theresa D'Angelo (810) 254-8600	Product has been developed primarily for the automotive industry.
AT&T EDI Marketing Manager Room 4A09, 400 Interpace Parkway Parsippany, NJ 07054	Marketing (800) 242-6005	Provides list of translation software products certified for operation with AT&T's EDI VAN.
Base 2 Corporation 435 East Mill Street Plymouth, WI 53073	Paul Gutelius (414) 892-4566	Product has been developed primarily for automotive industry suppliers, retailers, and manufacturers.
Computer Power, Inc. P.O. Box 5568 Florence, SC 29502	Diane Boatwright (803) 665-0478	Requested to be excluded; product is primarily used by hospitals and electronics organizations.
Dun & Bradstreet Software 3445 Peachtree Road, Northeast Atlanta, GA 30326	Don Bush (404) 239-3411	Provides business applications that support EDI; translation software may only be purchased as part of application.
Dynax Resources, Inc. 2 Jericho Plaza Jericho, NY 11753	Lisa Visconti (516) 932-9080	Remarkets Premenos EDI translation software products.
EDI Support, Inc. 275 Hill Street, Suite 206 Reno, NV 89501	Mary Jo Barton (702) 538-2910	Offers software that interfaces user's application system to EDI translation software products from Premenos (AS400), Supply Tech (PC), and Telink (PC). Also offers software that supports universal product codes.
ESCOM Software Services Ltd. #518-4211 Kingsway Burnaby, BC V5H1Z6	Bill Stephens Grant Andrews (800) 661-1196 (604) 438-7361	Remarkets EDS EDI translation software products. Also provides EDI system integration services.
Fritz Companies, Inc. P.O. Box 66215 AMF O'Hare International Airport Chicago, IL 60666	John Fitzgerald (708) 616-5523	Offers a turnkey system developed exclusively for import and export companies.
Future Three Software, Inc. 33031 Schoolcraft Road Livonia, MI 48150	Sarah Marchi (313) 261-5609	Product has been developed exclusively for the automotive industry.
Genzlinger Associates, Inc. Two Northfield Plaza, Suite 212 5700 Crooks Road Troy, MI 48098	Roger Marshall (810) 879-7070	Product has been developed exclusively for automotive industry and repetitive manufacturers.
Information Access, Inc. 8801 East Pleasant Valley Road Cleveland, OH 44131	Rich Stibrick (216) 328-0911	Value-added reseller; offers a turnkey system that interfaces only with its order-entry software developed for manufacturers and brokers in the food industry.

Table B-2. EDI Translation Software Vendors Excluded from Guide (Continued)

Company	Contact	Reason
Information Management Consultants, Inc. 5035 Charlotte Avenue Evansville, IN 47720	John Dyer (812) 421-0045	Offers application interface software that operates with Premenos Corp.'s EDI translator; provides mapping, editing, and auditing functions.
INFOWARE, Inc. 9701 West Higgins Road, Suite 200 Rosemont, IL 60018-4715	Bob Newman (708) 825-5500	Offers application interface software that operates with Extol, Inc.'s EDI translator, Premenos Corp.'s EDI translator and all Sterling EDI translators except for mainframes.
Innovative Computing Corporation 4300 Highline Boulevard, Suite 100 Oklahoma City, OK 73108	Dan Wancura (405) 949-9070	Remarkets Premenos translator as part of a trucking and transportation software package.
Logistics Concepts 4555 Wilson SW Grandville, MI 49418	Shane Czetli (616) 531-8900	Product is industry-specific; offers a warehousing software package that interfaces with St. Paul Software's EDI translation software products.
Management Computer Systems 123 North Union Avenue Cranford, NJ 07016	Shelly Hull (908) 272-3080	Product has been developed exclusively for the grocery (UCS and X12 standards).
Manufacturing Systems, Inc. P.O. Box 52007 6700 Baum Drive, Suite 4 Knoxville, TN 37950	Walter Williams (615) 558-3001	Requested to be excluded; company only works with manufacturing companies in Eastern Tennessee.
PLP Systems, Inc. 610 West College, Suite 200 Murfreesboro, TN 37130	Bill Parrott (615) 896-0081	Remarkets EDI translation software products developed by IBM, Premenos Corp., and Supply Tech, Inc.; also develops custom EDI software.
Prophet 21 19 West College Avenue Yardley, PA 19067	Debbie Dickerson (215) 493-8900	Produces a turnkey system developed primarily for electrical, plumbing, and industrial distribution users.
Retail Data Systems 1901 South Harbor City Boulevard Melbourne, FL 32901	John Feronti (407) 951-9600	Offers point-of-sale, inventory, and merchandising software that interfaces with EDI translation software; does not offer an EDI translation software product for purchase.
Ross Systems Center Two 1100 Johnson Ferry Road, Suite 750 Atlanta, GA 30342	Steven James Rilene Simpson (404) 851-1872	Offers software that interfaces EDI translators with business applications (e.g., accounts payable, accounts receivable, sales, and inventory control) and manufacturing applications (e.g., purchasing and invoicing); does not offer an EDI translation software product for purchase.
SCS (Specialists in Custom Software) 5525 Oakdale Avenue, Suite 244 Woodland Hills, CA 91364	Kristin Eisen (818) 587-5660	Offers software that interfaces EDI translators with user application systems that support accounts payable, order-entry, or inventory control; also remarkets EDI translation software products.

Table B-2. EDI Translation Software Vendors Excluded from Guide (Continued)

Company	Contact	Reason
<p>Software Associates 219 Patterson Avenue Little Falls, NJ 07424</p>	<p>Bruce Hall (201) 244-1000</p>	<p>Remarkets Sterling Software's EDI translation software packages; performs EDI integration and customization services; and offers a generic application interface program that can be integrated with most PC translation software products.</p>
<p>Txbase Systems, Inc. 225 East Beaver Creek, Suite 200 Ontario, Canada L4B3P4</p>	<p>Ray Talwar (905) 771-8100</p>	<p>Product is industry specific; Unix-based and NT-based manufacturing system (MRPII) with an EDI server. Interfaces with existing EDI translation software products to communicate with trading partners.</p>
<p>Vertical Systems, Inc. 1745 114th Avenue SE, Suite 150 Bellevue, WA 98004</p>	<p>George Cross (206) 454-7494</p>	<p>Provides EDI integration services; does not offer a translation software product for purchase.</p>

Appendix C

EDI Translation Software Vendor Information

This appendix provides information—including hardware operating environment; product pricing; availability on the GSA schedule or DoD contracts; and third-party networks that the software accesses—on the products offered by EDI translation software vendors.

1 EDI SOURCE, Inc.

ADDRESS: 38 Brighton Dr.
Gaithersburg, MD 20877

CONTACT: Sales

PRODUCT: TELINK/Gateway

HARDWARE/OPERATING SYSTEM ENVIRONMENT:

IBM compatible Pentium PC with Windows 3.1, 95, or Windows NT; LAN compatible

EDI STANDARDS SUPPORTED: X12 and all subsets, UCS, EDIFACT

PRICING:

Basic Package Cost: \$4,550 includes all transaction sets needed, and communications scripts to any VAN and/or direct connectivity, including the Internet

Additional Charge per EDI Standard: \$310 for future standards version upgrades

Additional Charge per Transaction Set: \$300

Annual Maintenance Fee: 18 per cent of license fee

Maintenance Fee Includes: Unlimited technical support, product upgrades, documentation upgrades

Training Fee: \$1,000 per person

Additional Fees: Not available.

GSA/DoD Schedules or Contracts: None

NETWORKS DIRECTLY ACCESSED:

All public and most private networks; Internet

VENDOR EXPERIENCE:

Year Company Founded: 1989

Date Package First Available: 1984 for the translator; 1989 for the data mapper

EDI PROFESSIONAL STAFF RESOURCES:

Technical Staff: 3

Hot Line: 3

Total: 3

MISCELLANEOUS INFORMATION:

Security including encryption is available via a third party product. On-site installation, implementation planning, hub development programs, custom built EDI packages, and consulting services available.

Programming Language Used by Package: FoxPro, Delphi

Advanced Communications Systems

PRODUCT: Envision for Unix and Windows NT
EDI Management System for PC
EDI Management System for MVS
EDI Management System for HP and DEC

HARDWARE/OPERATING SYSTEM ENVIRONMENT:

Envision for Unix and Windows NT—All major implementations of Unix on a Windows 95 or Windows NT workstation; Windows NT Server with Windows 95 or NT workstation
EDI Management System for PC—IBM compatible PC with Windows 3.1 or higher
EDI Management System for MVS—IBM MVS with MVS XA or ESA
EDI Management System for HP and DEC—HP3000 with 9xx operating system; DEC with VMS or Open VMS

EDI STANDARDS SUPPORTED: All major standards and subsets including X12, EDIFACT, CALS, HEDIC, TDCC, AIAG, UCS, VICS, and WINS

PRICING:

Basic Package Cost: Envision for Unix and Windows NT: \$13,000 and higher
EDI Management System for PC: \$3,000 and higher
EDI Management System for MVS: \$36,000 and higher
EDI Management System for HP and DEC: \$20,000 and higher

Additional Charge per EDI Standard: One is included with annual maintenance; additional standards are \$500 each.

Additional Charge per Transaction Set: \$100

Annual Maintenance Fee: 18 percent of the current license fee

Maintenance Fee Includes: Hotline support, new releases, and one additional EDI standard version per renewal period

Training Fee: \$599 at St. Paul Software location; \$1,300 per day plus travel and living expenses for on-site training.

Additional Fees: Not available

GSA/DoD Schedules or Contracts: None

Appendix D

EDI Translation Software Functions and Features

Table D-1 lists 52 functions and features that can be included in an EDI translation software package for different operating environments: stand-alone microcomputer, front-end microcomputer, minicomputer, or mainframe. Those operating environments stem from an analysis of the Department of Defense's 152 largest continental U.S. shipping activities that generate government bills of lading. The entries in the table indicate whether the function or feature is mandatory (M) or optional (O) in the software package. Each function and feature is defined in Appendix G.

Table D-1. EDI Translation Software Requirements

Function/feature	Operating environment		
	Stand-alone	Front-end	Minicomputer/ mainframe
Communications			
Communications Software	M	M	M
Transaction Set Consolidation Routines	M	M	M
Multiple Communications Interface	O	O	O
Multiple Communications Protocol Support	O	O	M
Network Identification Table	M	M	M
Unattended Operations Capability	M	M	M
Systems Utilities			
Automatic Recovery/Restart Capability	M	M	M
Installation Routines	M	M	O
System Interface Routines			
Application System Interface	M	M	M
Conditional Data Mapping Capability	O	O	O
Data Input Screens	M	O	O
Input Editing	M	O	O
User-Defined Print Output	M	O	O
User-Definable System Interface	O	O	O
User-Defined Data Input Screens	O	O	O

TableD-1. EDI Translation Software Requirements (Continued)

Function/feature	Operating environment		
	Stand-alone	Front-end	Minicomputer/ mainframe
Customized Operations Routines			
Automatic Functional Acknowledgment Generation	M	M	M
Code Cross-Reference Capability	O	O	O
Data Element Delimiter Table	M	M	M
Functional Acknowledgment Capability	M	M	M
Multiple Header Support	M	M	M
Segment Terminator Table	M	M	M
Trading Partner Profile	O	M	M
Transaction Set Sequential Numbering	M	M	M
Version Support Table	M	M	M
Editing			
Automatic Error Notification	M	M	O
Character Conversion Capability ^a	O	O	O
Inbound Standards Compliance Editing	M	M	M
Internal Codes Duplication Routine	M	O	O
Outbound Standards Compliance Editing	M	M	M
Transaction Set Correction Capability	M	O	O
System Maintenance Routines			
Automated Purging	M	M	M ^b
Expandability	M	M	M
Maintenance Support	M	M	M
Table-Driven Software Structure	M	M	M
Transaction Set Archiving	M	M	M
Version Support	M	M	M
Reports			
Error Reports	M	M	M
Functional Acknowledgment Reconciliation	M	M	M
Inbound Transaction Set Reporting	M	M	M
Outbound Transaction Set Reporting	M	M	M
Transmitted Characters	O	O	O
User-Defined Management Reports	O	O	O

^a Pertinent only to those sites that use point-to-point communications with one or more trading partners.

TableD-1. EDI Translation Software Requirements (Continued)

Function/feature	Operating environment		
	Stand-alone	Front-end	Minicomputer/ mainframe
Support			
Help Screens	O	O	O
Technical Documentation	M	M	M
Training ^b	M	M	M
Tutorial Package	O	O	O
User Documentation	M	M	M
User Support (Hot Lines)	M	M	M
Miscellaneous			
Compatibility with Encryption and Authentication Package ^c	O	O	O
Multiple Users	O	O	O
Selective Accessibility	M	M	O
System Entry Security	M	M	O

^b Software packages require either training or help screens and a tutorial package.

^c When the requirements for this feature are fully defined, we expect that it will be mandatory for all operating environments.

Appendix E

Selecting EDI Translation Software

This appendix provides an overview of how the guide can be used to aid in the selection of EDI translation software for federal government and Department of Defense sites. The following step-by-step procedure for selecting EDI translation software for a particular site is provided:

- ◆ Identify the site's EDI data processing requirements, including the application system that will be integrated with the EDI translation software.
- ◆ Identify the hardware and corresponding operating system that will contain the EDI software. Categorize the hardware as microcomputer, minicomputer, or mainframe and determine the EDI translation software requirements for a specific site.
- ◆ Use the information in Appendix B to identify vendors that sell software for the desired hardware environment (microcomputer, minicomputer, or mainframe) and operating system (Unix, Windows, or Windows NT).
- ◆ Use the information in Appendix C to review the software product offerings and descriptions of vendors identified in the previous step. Identify the vendor products that offer EDI translation software for the required hardware and operating system.
- ◆ Use the information in Appendix D to identify the functions and features that the EDI translation software package requires for a specific operating environment. Determine if the products reviewed in the previous step satisfy the site's major EDI translation software requirements by questioning the vendors' sales representatives.

In most cases, more than one product will meet a site's requirements. We suggest that site personnel request product literature from those vendors and, if procurement rules permit, request that they demonstrate their products. Before purchasing a particular product, we recommend that every site test an evaluation copy on the system that will operate it.

Appendix F

EDI Support and Procurement Software

This appendix provides detailed information on EDI support products as well as information on EDI products developed to satisfy federal and Department of Defense (DoD) procurement programs. For each vendor, the information includes the hardware operating environment, product pricing, and availability on the General Services Administration (GSA) schedule or DoD procurement contracts.

PRODUCT: Link for Windows—16-bit translator application for contractors participating in Federal Government EDI procurement programs that includes automated document turnaround, transaction status reporting, public award notices, communications and e-mail capabilities; operates exclusively with the Softshare VAN.
Softshare Vista—32-bit translator application for contractors participating in Federal Government EDI procurement programs that integrates e-mail, EDI, and the Internet; includes secure messaging, secure EDI, and encryption.

HARDWARE/OPERATING SYSTEM ENVIRONMENT:

Link for Windows: IBM-compatible 486 66 megahertz PC with Windows 3.11 or higher, 16 MB RAM, 5MB free space on hard drive

Softshare Vista: IBM-compatible 486 66 megahertz PC with Windows 95 or Windows NT 4.0, 16 MB RAM, CD-ROM, 30 MB free space on hard drive

EDI STANDARDS SUPPORTED: Link for Windows: X12
Softshare Vista: X12, EDIFACT

PRICING:

Basic Package Cost: Link for Windows: included with Softshare VAN services; VAN Services Account set-up: \$175; Services: \$60 per month to \$480 per year
Softshare Vista: \$595 initial offering through March 1998; VAN Services Account set-up \$125; Services \$25 per month to \$480 per year

Additional Charge per EDI Standard: N/A

Additional Charge per Transaction Set: Government: None; Commercial: call for prices

Annual Maintenance Fee: Link for Windows: \$150 for Government Program only
Softshare Vista: \$150 for Government Program only; free upgrades at Web site

Maintenance Fee Includes: Software upgrades

Training Fee: Phone training included in account set-up fee

Additional Fees: \$0.15 for in-bound EDI transactions and no charge for outbound transactions

GSA/DoD Schedules or Contracts: Not applicable

NETWORKS DIRECTLY ACCESSED:

Softshare VAN; interconnections with all major VANs

VENDOR EXPERIENCE:

Year Company Founded: 1982

Date Package First Available: Link for Windows: 1993
Softshare Vista: 1997

DEFINITION OF TERMS

Application System Interface. A routine that extracts data from an application system data base and creates fixed-length files in the vendor's format for subsequent translation to an EDI format. The reverse process is also applicable.

Automated Purging. A feature that automatically deletes archived transaction set data according to user-specified criteria, such as date ranges.

Automatic Error Notification. A feature in software that automatically notifies the user of errors encountered during translation by displaying a message or similar notification.

Automatic Functional Acknowledgment Generation. The automatic creation of a functional acknowledgment transaction set upon receipt of an EDI transmission from a trading partner.

Automatic Recovery and Restart Capability. A routine that automatically recovers any data being processed and restarts the application in the event of a power or communications failure.

Character Conversion Capability. Translation software that converts a sender's character set to the character set required by the receiver's computer (e.g., EBCDIC to ASCII).

Code Cross-Reference Capability. The ability to cross-reference and convert an EDI standard data element code into a user selected code. The reverse process is also possible.

Compatibility with Encryption and Authentication Package. A translation software package that can operate with an encryption and authentication package.

Communications Software. A software module that automatically dials the communications network and sends or receives EDI-formatted data.

Conditional Data Mapping Capability. The ability to translate data conditionally to or from EDI formats according to user-specified rules.

Data Element Delimiter Table. A table of alternative data element delimiters that is maintained for each trading partner, thus accommodating the requirements of different trading partners.

Data Input Screens. A set of screens to enter data into the translation software package for subsequent translation to an EDI format. (This feature is required when an application system does not reside on the user's computer.)

Error Reports. Reports of outbound or inbound transaction sets that do not comply with the EDI standards. (These reports are usually printed logs of each communications session presented in a non-EDI format that users easily understand.)

Expandability. The ability to incorporate new functions, such as EDI transaction sets, into an existing translation software package.

Functional Acknowledgment Capability. The ability to send or receive a functional acknowledgment transaction set that indicates the status of each EDI transaction set transmission to or from a trading partner.

Functional Acknowledgment Reconciliation. The matching of transaction set messages with functional acknowledgments to identify the successful receipt of information by trading partners and the highlighting of unacknowledged transaction sets that have been sent.

Help Screens. On-line screens that provide assistance in the use of specific translation software functions.

Inbound Standards Compliance Editing. The editing of data received from trading partners to determine whether they are in compliance with the EDI standards.

Inbound Transaction Set Reporting. The capability to print inbound transaction sets for audit trail purposes. (The document number, control number, date, and time of every message received are typically included in the report.)

Input Editing. A feature that permits the user to edit every field and segment of a transaction set as data are manually entered into a system to ensure compliance with EDI standards.

Installation Routines. Programs that automatically install translation software packages in a computer with minimal user intervention.

Internal ID Number Duplication Control. A program that monitors the use of internal business document identification numbers, such as invoice numbers, to avoid duplicates.

Maintenance Support. EDI standards updates and software enhancements provided by the translation software vendor, usually for an annual fee.

Multiple Communications Interface. Translation software that allows users to communicate with more than one telecommunications network, preferably in the same communications session.

Multiple Communications Protocol Support. The communications software that exchanges EDI-formatted data with trading partners; it typically supports several protocols such as asynchronous, bisynchronous 2780 or 3780, X.25, X.400, and X.435.

Multiple Header Support. EDI translation software that supports multiple envelope headers, including ISA and BG, depending on trading partner requirements.

Multiple Users. A feature that permits more than one person to use a translation software system concurrently. (On personal computers that use DOS, a local area network typically provides this feature.)

Network Identification Table. A table containing network addresses, telephone numbers, and other information needed to communicate with a trading partner through a telecommunications network.

Outbound Standards Compliance Editing. The editing of transmitted data to determine if they comply with EDI standards.

Outbound Transaction Set Reporting. The capability to print outbound transaction sets for audit trail purposes. (The document number, control number, date, and time of every message sent are typically included in the report.)

Segment Terminator Table. A table of alternative segment terminators maintained for each trading partner that allows for different communications network or trading partner requirements.

Selective Accessibility. A feature that limits user access to specific screens and functions.

System Entry Security. System security provided through the use of passwords and user-identification codes.

Table-Driven Software Structure. EDI data elements and segments maintained in a table structure.

Technical Documentation. A narrative and graphic description of a system that provides technical personnel with sufficient information to troubleshoot portions of the translation software. (A data dictionary, a system flowchart, and all file structures are typically included in technical documentation.)

Trading Partner Profile. A profile of each trading partner that identifies the segments in a transaction set required by that trading partner.

Training. Vendor-offered training sessions that provide instruction on using translation software packages.

Transaction Set Archiving. The saving of EDI-formatted data on a computer for query purposes or restoration in the event of a computer failure.

Transaction Set Consolidation Routines. Software that groups transaction sets by trading partner prior to transmission, thus reducing communications costs; if more than one telecommunications network is used, the transaction sets are first grouped by network and then by trading partner.

Transaction Set Correction Capability. The ability to correct an outbound standards compliance editing error in a front-end operating environment or modify transaction set data prior to transmission. (This capability is typically provided in a format that does not require knowledge of EDI standards.)

Transaction Set Sequential Numbering. A routine that either assigns a sequential control number for all transmitted transaction sets for every trading partner or enables the receiver to determine if a transaction set is missing from the transmission by checking the sequential numbers of inbound transactions.

Transmitted Characters. A report of the number of characters transmitted and the time and date of each transmission for each EDI value-added network. (The report allows a user to reconcile each network's bill.)

Tutorial Package. An interactive, on-line program that guides a user through a prescribed sequence of steps on using a particular translation software package.

Unattended Operations Capability. The ability to program the EDI translation software to automatically perform EDI-related processes, such as sending or receiving EDI-formatted data at a user-specified time without an operator present.

User-Definable System Interface. Automated data-mapping procedures embedded in the EDI translation software package that create fixed- or variable-length files according to the user's requirements for subsequent translation to an EDI format. The reverse process is also applicable.

User-Defined Management Reports. Ad hoc management reports that a user can create, typically through a report generator embedded in the translation software package.

User-Defined Print Output. A feature that permits users to define the output format for printing manually entered data.

User Documentation. A nontechnical description of the translation software system and the operation of all system functions.

User Support (Hot Lines). Telephone support provided by a vendor to resolve any operating problem with a translation software package.

User-Defined Data Input Screens. A set of user-defined screens for entering data into a translation software package for subsequent translation into an EDI format. These screens are presented in a non-EDI format that does not require knowledge of EDI standards.

Version Support. Translation software that supports the current and two previous releases of an EDI standard.

Version Support Table. A table that identifies the version of every EDI standard used by each trading partner.

13. ABSTRACT (Maximum 200 words) This edition updates and expands the information presented in our previous versions. The guide provides information on commercially available electronic data interchange (EDI) translation software packages, EDI support products, and EDI products developed exclusively in response to federal and Department of Defense (DoD) procurement initiatives. The guide was first created in 1989 to aid federal government activities, including military departments and defense agencies, in procuring software for their EDI programs. However, many commercial organizations with an EDI program have also found the guide useful. The guide provides an introduction to EDI translation software, identifies a variety of EDI software packages, assesses the key features of each package, provides a list of functions and features that can be in a software package, and highlights features we believe are required to meet the EDI needs of federal government and DoD programs for several operating environments. The guide also includes a short overview on selecting EDI translation software.
